Can equity leadership change without a market correction?

This time technology stocks are backed by very robust cashflows

1998-2000: MSCI world tech sector return decomposition

2019 – 2024: MSCI world tech sector return decomposition

1998 – 2000 period was a run of ‘triumph of hope’:

- The market tech rally was stronger and faster than the current rally
- It was almost entirely driven by expansion of the price, rather than profit growth
- *The hang-over for markets lasted for almost two years*

The AI / tech rally this time has been more measured:

- Slower pace of performance
- Profits growth was a significant contributor to returns
- *But massive capital investment in AI will need to show a return for AI / tech rally to continue*
